THE RACE TO DECARBONIZE AND ELECTRIFY EVERYTHING

Presents the most profound **energy disruption opportunity** in over a century.

Hillcrest is a clean tech innovation company developing high-value, high-performance control systems and electric power conversion devices. We are building a global team of world-class control software, power electronics, and commercialization experts to bring energy solutions that power a more sustainable and electrified future to market.

FROM CONCEPT TO COMMERCIALIZATION

Hillcrest develops highly adaptive and cost-effective technology that unlocks significant efficiencies and maximizes system performance, delivering solutions to industry challenges across key markets:

ELECTRIC VEHICLES: RENEWABLE ENERGIES: ELECTRIC SYSTEMS:

Cost, Weight and Size	Power Efficiency	Lifetime Performance
✓ Smaller, lighter, and more powerful	✓ Significant efficiency gains	✓ Lower Stress on electrical parts

BREAKTHROUGH TECHNOLOGY ADVANCEMENTS

Delivered Technical Proof of Concept (POC) for new SiC High-Efficiency Inverter (HEI). Designed to boost EV performance, dramatically reducing total system losses and enabling higher switching frequencies.

“These latest test results confirm electro-technical proof of concept for the SiC HEI as one of the most efficient inverters of its type, with the ability to significantly increase power density and reduce cost, size, and weight for future electric vehicle and other e-mobility powertrains.”

IN DEVELOPMENT

A novel control concept incorporating the HEI as a fundamental component in system-level powertrain technology.

INVESTMENT HIGHLIGHTS

- 2 HEI POC’s for customer evaluation
- Highly adaptive and scalable technology across multiple industries
- Proprietary technology, IP ownership, pending patents
- Development, engineering, and commercialization expertise
- Extensive global industry network spanning automotive, renewables, and industrial applications
